

CRISPR Cre-Rat with Wnt1-CreERT2 Promoter

Product Information

Catalog Number 550-1 (embryo); 550-2 (rat)
Description Strain Sprague Dawley rat

This conditional knock-in Cre rat model uses CRISPR/Cas9-mediated cleavage and subsequent homology directed repair (HDR) by flanking the Wnt1-CreERT2 construct with two LoxP sequences. To achieve this, a pair of in vivo validated gRNAs, a single-stranded deoxyribonucleic acid (ssDNA) donor, and the Cas9 protein were injected into the mouse embryos. Mice born from the injection were screened by genotyping PCR and NGS/ Sanger sequencing to confirm founders (F0). The Cre rat line generated expresses Cre recombinase under the control of tissue specific gene promoter Wnt1. Furthermore, DNA recombinase activity is induced by Tamoxifen, so that the Cre-Lox model will be conditional and inducible.

Description

Promotor Name	Technology	Tissue/Cell-specificity	Promotor Description	Comments	Reference
Wnt1-CreERT2	CRISPR/cas9	Developing neural crest and midbrain	1.3-kb 5' promoter and 5.5 kb 3' enhancer of the mouse Wnt1, wingless-related MMTV integration site 1	n/a	Chou <i>et al</i> 2013

Shipping Embryos (dry ice) and rats (cages)

Storage and Stability Store CRISPR Cre-Rat embryos in liquid nitrogen freezer immediately upon receipt. Store the plasmids and ganciclovir at -20°C. Do not freeze-thaw plasmids repeatedly. The products provided in this kit are stable for at least 6 months from the date of receiving when stored as directed.

Safety Precaution **PLEASE READ BEFORE HANDLING ANY FROZEN VIALS.** Please wear the appropriate Personal Protective Equipment (lab coat, thermal gloves, safety goggles and a face shield) when handling the cells. Handle the frozen vials with due caution. Please be aware that the following scenario can occur: Liquid nitrogen can leak into the vials when the vials are submerged in liquid nitrogen. Upon thawing, the liquid nitrogen returns to the gas phase, resulting in a dangerous build-up of pressure within the vial. This can result in the vial exploding and expelling not only the vial contents but also the vial cap and plastic fragments of the vial.

Catalog#	Component	Amount	Available
550-1	CRISPR Cre-Rat Embryo – Wnt1-CreERT2	1 straw	inquire
550-2	CRISPR Cre-Rat – Wnt1-CreERT2	1 rat	inquire

Supporting Validation Data*

Summary of Available Validation Data

* Limited validation data is available.

Note: The F0 mice were not mated with WT to ensure transmission of the cKO genotype to F1 generation. Please inquire prior to purchasing.

Control: Nestin-Cre mouse

Wnt1-CreERT2
